

ULTRA DOME DOMING KITS & CONSUMABLES

Doming Explained:

Doming is a process of adding a mix of clear polyurethane resin and a catalyst onto normally a selfadhesive vinyl decal to create a "lens effect" or "dome" over the top. This coating is semi-rigid and completely clear. Doming resin is applied as a thick, tacky liquid, spreading to the edges of the vinyl and stopping on its own.

Doming is a great way to create a 3D, crystal-clear lens to enhance the look and feel of creative projects. All you need are printed and kiss-cut decals (stickers), a Maizey doming resin starter kit, our easy to use step-by-step instructions and some practice. You will be well on your way to producing high quality, 3D labels and badges. Maizey supply complete doming starter kits, doming guns and consumables.

The "Doming Starter Kit" contains:

Glass, a Leveler, Tape, Vinyl Matrix, a Plunger, Resin, Mixer, Lighter, Bicarbonate of Soda, Gloves, Cloth.
